

PanelMatch™ RangeMax™ LXMG1811-05-6x

5V 6W CCFL Programmable Inverter Module

PRODUCTION DATASHEET

DESCRIPTION

The LXMG1811-05-6x is a Single Output 6W CCFL (Cold Cathode Fluorescent Lamp) Inverter Module designed for the driving LCD backlight lamps for panels in the range of 3.9" to 15".

Utilizing the full-bridge drive topology capabilities of the Microsemi's highly integrated LX6512 CCFL backlight controller the inverter allows a wider lamp output voltage range 280V to 730V compared to Microsemi's existing Direct Drive™ inverter solutions.

For applications needing fully automatic brightness control an 'S' version (LXMG1811-05-6xS) of the inverter includes a connector to mate the inverter with an external light sensor board (the LXMG1800_LS) which can extend the life of the display and save power (particularly important for battery powered products).

The maximum output current of the inverter is externally programmable over a range of 4mA to 7mA in 1mA steps to allow the inverter to properly match (PanelMatch™) to a wide array of LCD panel lamp current specifications. For higher input voltage requirements the LXMG1813-12-6x or -6xS will work from a 9V to 16V input supply.

The modules include a dimming input that permits brightness control from a DC voltage source, a PWM signal or an external potentiometer. The resultant "burst drive" that energizes the lamp was designed to ensure that no premature lamp degradation occurs, while allowing significant power savings at lower dim levels.

Other benefits of the inverter's topology include stable fixed-frequency operation, secondary-side strike voltage regulation and both open/shorted lamp protection with fault timeout.

KEY FEATURES

- PanelMatch Externally Programmable Maximum Output Current
- Wide Lamp Voltage Range
- Fixed Frequency Operation
- Output Short-Circuit Protection and Automatic Strike-Voltage Regulation and Timeout
- RangeMAX Wide Range Dimming (50:1+)
- Rated From -30°C to 80°C
- UL60950 Pending
- RoHS Compliant

APPLICATIONS

- Medical Instrument Displays
- Portable Instrumentation
- Desktop Displays
- Industrial Display Controls

BENEFITS

- Smooth, Flicker Free Full-Range Brightness Control
- Programmable Output Current Allows Inverter to Mate with a Wide Variety of LCD Panel's Specifications

SELECTABLE MAXIMUM OUTPUT CURRENT 4MA_{RMS} TO 7MA_{RMS}

PACKAGE ORDER INFO

| PART NUMBER | OUTPUT CONNECTOR | INVERTER MATES DIRECTLY TO PANEL CONNECTORS |
|----------------|--|---|
| LXMG1811-05-61 | JST SM02(8.0)B-BHS-1-TB(LF)(SN), Yeon Ho 20015WR-05A00 or equivalent | JST BHR-03VS-1 |
| LXMG1811-05-62 | JST SM02B-BHSS-1-TB(LF)(SN), Yeon Ho 35001WR-02A00 or equivalent | JST BHSR-02VS-1 |

ABSOLUTE MAXIMUM RATINGS

| | |
|--|----------------------|
| Input Signal Voltage (V_{IN})..... | -0.3V to 6V |
| Input Power | 8W |
| Output Voltage, no load | 1800V _{RMS} |
| Output Current | 8mA _{RMS} |
| Output Power | 6W |
| Input Signal Voltage (SLEEP Input) | -0.3V to V_{IN} |
| Input Signal Voltage (BRITE) | -0.3V to 5.5V |
| Ambient Operating Temperature, zero airflow..... | -30°C to 80°C |
| Storage Temperature Range..... | -40°C to 85°C |

Note: Exceeding these ratings could cause damage to the device. All voltages are with respect to Ground. Currents are positive into, negative out of specified terminal.

RECOMMENDED OPERATING CONDITIONS (R.C.)

This module has been designed to operate over a wide range of input and output conditions. However, best efficiency and performance will be obtained if the module is operated under the condition listed in the 'R.C.' column. Min. and Max. columns indicate values beyond which the inverter, although operational, may not function optimally.

| Parameter | Symbol | Recommended Operating Conditions | | | Units |
|---|----------------|----------------------------------|------|------|-------------------|
| | | Min | R.C. | Max | |
| Input Supply Voltage Range (Fully Regulated Lamp Current) | V_{IN} | 4.75 | 5.0 | 5.25 | V |
| Input Supply Voltage Range (Functional) | | 4.5 | 5.0 | 5.5 | |
| Output Power | P_O | | 4.2 | 6.0 | W |
| Linear BRITE Control Input Voltage Range | V_{BRT_ADJ} | 0 | | 2.5 | V |
| Lamp Operating Voltage | V_{LAMP} | 280 | 500 | 730 | V _{RMS} |
| Lamp Current (Full Brightness) | $I_{O(LAMP)}$ | 4.0 | | 7.0 | mA _{RMS} |
| Operating Ambient Temperature Range | T_A | -30 | | 80 | °C |

ELECTRICAL CHARACTERISTICS

The following specifications apply over the recommended operating condition and ambient temperature of 0°C to 60°C except where otherwise noted; BRITE ≥ 2.5V, SLEEP ≥ 2.1V, $V_{IN} = 5V$.

| Parameter | Symbol | Test Conditions | LXMG1811-05-6x | | | Units |
|-----------------------------------|--------------|---|----------------|------|------|-------------------|
| | | | Min | Typ | Max | |
| OUTPUT PIN CHARACTERISTICS | | | | | | |
| Full Bright Lamp Current | $I_{L(MAX)}$ | SET ₁ = Ground, SET ₂ = Ground | 3.5 | 4.0 | 4.5 | mA _{RMS} |
| Full Bright Lamp Current | $I_{L(MAX)}$ | SET ₁ = Ground, SET ₂ = Open | 4.5 | 5.0 | 5.5 | mA _{RMS} |
| Full Bright Lamp Current | $I_{L(MAX)}$ | SET ₁ = Open, SET ₂ = Ground | 5.4 | 6.0 | 6.6 | mA _{RMS} |
| Full Bright Lamp Current | $I_{L(MAX)}$ | SET ₁ = Open, SET ₂ = Open | 6.3 | 7.0 | 7.7 | mA _{RMS} |
| Full Bright Lamp Current | $I_{L(MAX)}$ | $V_{IN} = 4.5$ to $5.5V$; SET ₁ = Open, SET ₂ = Ground | 5.3 | 6.0 | 6.7 | mA _{RMS} |
| Min. Average Lamp Current | $I_{L(MIN)}$ | BRITE = 0V, SET ₁ = SET ₂ = Ground, $I_{L(MIN)} = I_{LMAX} * \sqrt{\text{Burst Duty Cycle}}$ | | 1.0 | | mA _{RMS} |
| Lamp Start Voltage | V_{LS} | -30°C < T_A < 80°C, $V_{IN} \geq 4.5V$ | 1400 | 1650 | | V _{RMS} |

| Strike (Open Lamp) | $T_{\text{S_DWELL}}$ | | 1.0 | 1.4 | 2.0 | Sec |
| Supply Current under Fault condition | I_{FAULT} | Fault condition | | 5 | | mA |
| Typical Efficiency | η | SET ₁ = Open SET ₂ = Ground, $V_{\text{LAMP}} = 500\text{V}_{\text{RMS}}$ | 75 | 80 | | % |

FUNCTIONAL PIN DESCRIPTION

| CONN | PIN | DESCRIPTION |
|--|---------------------------|---|
| CN1 (Molex 53261-0871 or equivalent) mates with 51021-0800 housing, 50079-8100 pins. Mates with LX9501G input cable assembly | | |
| CN1-1 | V_{IN} | Main Input Power Supply $4.75\text{V} \leq V_{\text{IN}} \leq 5.25\text{V}$ (Functional 4.5V to 5.5V) |
| CN1-2 | | |
| CN1-3 | GND | Power Supply Return |
| CN1-4 | | |
| CN1-5 | $\overline{\text{SLEEP}}$ | ON/OFF Control. ($0\text{V} \leq \overline{\text{SLEEP}} \leq 0.8\text{V} = \text{OFF}$, $\overline{\text{SLEEP}} \geq 2.1\text{V} = \text{ON}$) |
| CN1-6 | BRITE | Brightness Control (0V to 2.5V). 2.5V gives maximum lamp current. |
| CN1-7 | SET ₁ | SET ₁ MSB Connecting this pin to ground decreases the output current (see Table 1) |
| CN1-8 | SET ₂ | SET ₂ LSB Connecting this pin to ground decreases the output current (see Table 1) |
| CN2 for LXMG1811-05-61 and -62 (JST SM02(8.0)B-BHS-1-TB(LF)(SN) ; Yeon Ho 20015WR-05A00, SM02B-BHSS-1-TB(LF)(SN) ; Yeon Ho 35001WR-02A00) or equivalent | | |
| CN2-1 | V_{HI} | High voltage connection to high side of lamp. Connect to lamp terminal with shortest lead length. DO NOT connect to Ground. |
| CN2-2 | V_{LO} | Connection to low side of lamp. Connect to lamp terminal with longer lead length. DO NOT connect to Ground |

TABLE 1
OUTPUT CURRENT SETTINGS

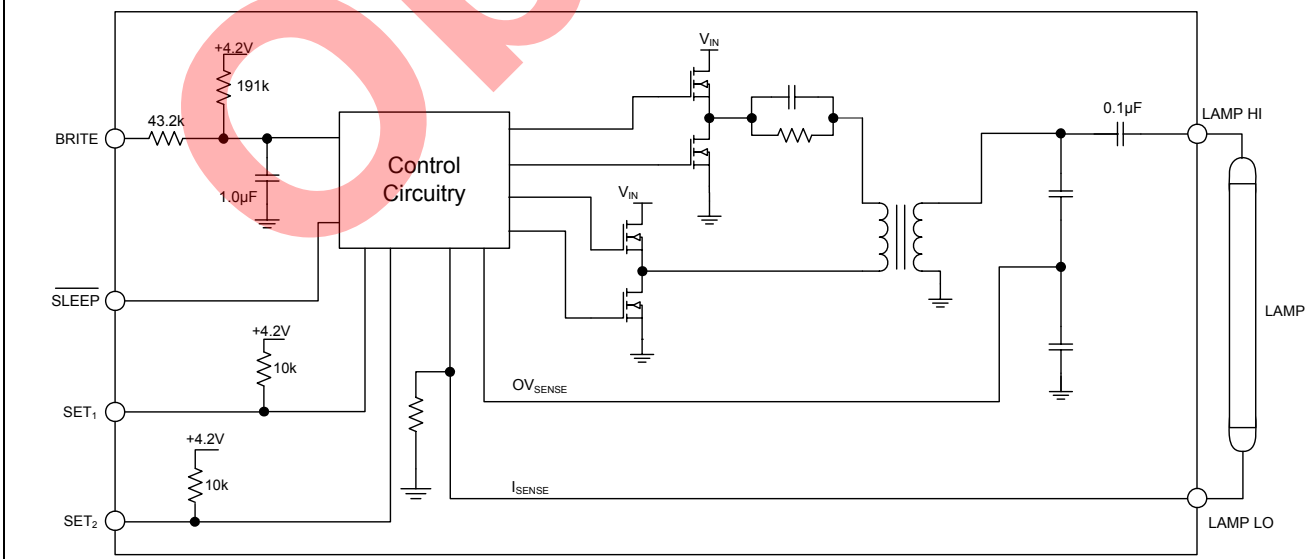

| SET ₁ (Pin 7) | SET ₂ (Pin 8) | Nominal Output Current |
|-----------------------------|-----------------------------|------------------------|
| Open* | Open* | 7.0mA |
| Open* | Ground | 6.0mA |
| Ground | Open* | 5.0mA |
| Ground | Ground | 4.0mA |

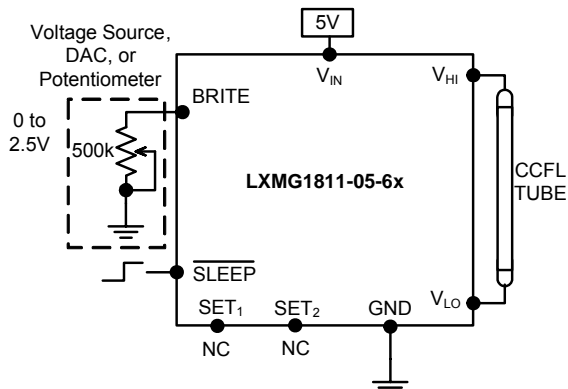

* If driven by a logic signal it should be open collector or open drain only, not a voltage source.

PHYSICAL DIMENSIONS
LXMG1811-05-6x

Warning
High Voltage is present at high side of transformer, its core and the high side of the output connector, please provide at least 3 mm clearance (in all directions) on the component side of the board to any conductor when mounting

All dimensions are in millimeters, inches are for reference only

|---|---|----------------------|
| L | L | 4.0mA _{RMS} |
| L | H | 5.0mA _{RMS} |
| H | L | 6.0mA _{RMS} |
| H | H | 7.0mA _{RMS} |

L=GND; H=Open

Figure 2 – Max Output Current (SET₁ and SET₂ Inputs)

- The brightness control may be a voltage output DAC or other voltage source, a digital pot or 500k manual pot. The inverter contains an internal 234.2k pull-up to typically 4.2V to bias the pot. Logic levels may be used up to 5V, however the inverter will reach maximum current at less than 100% duty cycle. This can be calculated as approximately 2.3V divided by the logic high voltage level; with 3.3V logic level this corresponds to about 70% duty cycle for maximum lamp current.
- If you need to turn the inverter ON/OFF remotely, connect to TTL logic signal to the SLEEP input.
- Connect V_{HI} to high voltage wire from the lamp. Connect V_{LO} to the low voltage wire (wire with thinner insulation). Never connect V_{LO} to circuit ground as this will defeat lamp current regulation. If both lamp wires have heavy high voltage insulation, connect the longest wire to V_{LO}. This wire is typically white.
- Use the SET₁ and SET₂ (see Figure 2) inputs to select the desired maximum output current. Using these two pins in combination allows the inverter to match a wide variety of panels from different manufacturers. Generally the best lamp lifetime correlates with driving the CCFL at the manufacture's nominal current setting. However the SET₁ and SET₂ inputs allow the user the flexibility to adjust the current to the maximum allowable output current to increase panel brightness at the expense of some reduced lamp life.
- Although the SET pins are designed such that just leaving them open or grounding them is all that is needed to set the output current, they can also be actively set. Using an open collector or open drain logic signal will allow you to reduce the lamp current for situations where greater dim range is required. Since the dim ratio is a factor of both the burst duty cycle and the peak output current, using this technique the effective dim ratio can be increased greater than the burst duty cycle alone. Conversely, the SET inputs could be used to overdrive the lamp temporarily to facilitate faster lamp warm up at initial lamp turn on. Of course any possible degradation on lamp life from such practices is the user's responsibility since not all lamps are designed to be overdriven.
- The inverter has a built-in fault timeout function. If the output is open (lamp disconnected or broken) the inverter will attempt to strike the lamp up to about 1.4 seconds, after which (without success) the inverter will shutdown. In this mode the inverter will draw about 5mA from V_{IN}. In order to restart the inverter it is necessary to toggle the sleep input or cycle the V_{IN} input supply.
